Please be aware this meeting has now been postponed due to COVID-19. Please keep updated on our event website as it is hoped this meeting will be rescheduled for December 2020.

Data Assimilation Special  
Interest Group Meeting, Co-  
Sponsored with NCEO

ABSTRACT| When analysing data in the Earth Sciences it is often necessary to compare an observation of a physical quantity with its representation in a different form. This process results in a representation uncertainty which is often difficult to evaluate.

Sponsored by the NCEO, the objective of this workshop is to determine how representation uncertainty is defined and quantified across the Earth science communities.
